UNITED STATES PATENT OFFICE.

WILLIAM H. DE PEW, OF NEW YORK, N. Y.

DESIGN FOR A RAZOR.

SPECIFICATION forming part of Design No. 12,964, dated June 6, 1882.

Application filed April 19, 1882. Term of patent 14 years.

To all whom it may concern:

Be it known that I, WILLIAM H. DE PEW, of New York city and county, New York, have invented a new and Improved Design for Razors, of which the following is a full, clear, and exact description.

In the drawings, Figure 1 is a side view of my newly-designed razor. Fig. 2 is a cross-section on line *x x* of Fig. 1, and Fig. 3 is a cross-section on line *y y* of Fig. 1.

The invention consists specially in the shape or configuration of the shank or handle B of the blade A, which is made in reverse curve form or in the form of an elongated S. The curve or bend *a*, next to the heel of the blade, extends above the back of the blade, so as to increase the depth of the concavity at the opposite side. The reverse curve *b* extends to the end of the shank of the handle, and termi-

nates at a point on a line which, if drawn from the end of the shank to the outer and back end of the blade, would touch the back of the curve *a*.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

1. The design for razors herein shown and described, which consists in the reversely-curved shank B of the blade A.

2. The design for razors herein shown and described, which consists in the curve *a* in the shank at the heel of the blade, projecting beyond the back of the blade, and the reverse curve *b*, forming the terminal of the shank.

WILLIAM H. DE PEW.
